'user manual – system level Jan2016'

Main news - 'general'

✓ **Create a report via 'Graph'** - with the new WF-RepTool **version 4.3**, installed in December 2015 you have the option to create a WF-RepTool report via the 'Graph' (see user manual – reporter level, point 3.3.3, page 92) . You just have to add a report 'in the traditional way' by choosing the input fraction and the input weight for the report. With this you will get a graph with an empty symbol for the first step treatment.

With having the option to add fractions and acceptors/technologies with the ✚ - icon, you have now the option to create the whole report via the 'Graph'.

Of course you still have the option to create the report ''in the traditional way' and to use the 'Graph' for a quick check of open points (red shades on symbols).
