Main news WF-RepTool November 2019

summary by Renate Gabriel & Willi Haghofer

2019-11-14

for details please see
'user manual – reporter level Oct2019' and
'user manual – system level Oct2019'

Main news – IT / program

✓ The WF-RepTool server has been updated to the latest PHP version (PHP 7.3) and the WF-RepTool itself internally adapted accordingly. With this all users of the so called 'hosted version' will especially benefit from improved performance.

✓ **Evaluation feature** – the new evaluation feature allows WEEE systems / WF-RepTool administrators to make their WF-RepTool "smarter", that is they may check the plausibility of data entries and define appropriate rules.

Breaches of those rules will be checked and pointed out (e.g. red frame in the 'Graph') automatically for all reports and packages.

- see Video for the **WEEE system / administrator - system users** as well as an extra Video for **reporters**.

✓ The **'Inspect' feature** is also available for **tasks** now.

Main news – organisation

✓ The **testing** of new IT features by users was organised and integrated in the program development and release (beside the regular testing by IT during the last years).

Main news - information

✓ **Videos**

Since September 2019 a **series** of **videos** for WF-RepTool administrators (and system users) was published:

- Access options

- Needs of administration, adding users

- Options of Configuration

- 'Inspect / Inspection rules' and the option to set

- 'Evaluation' feature– see above under IT development.

- 'Inspect / Inspection rules' and the option to set

- 'Controller remarks' for system users have been released.

✓ The **FAQs** on the website have been reviewed and updated
