

The French Way

WEEE system doing the reporting

Introduction

Name:	Soline Van Wymeersch
Country:	France
Organization:	Eco-systèmes
User of WF-RepTool since:	2007 (Eco-systèmes), personally (2007)
Report interval:	Once a year
Number of recyclers:	60 (including main acceptors)
Number of <u>yearly</u> reports:	Over 100 reports (including acceptors reports)
Specialties:	Reporting done by the WEEE system Full downstream monitoring

Why doing reports ourselves?

- 2007: Teaching treatment partners how to use the tool (partners = companies and social economy partners)
- 2008: first reports (every quarter of the year)
 - ➔ So many mistakes in the more than 100 reports per quarter!
 - ➔ Problem to control and correct reports
- 2009 : decision to base reports only on batches and to make them internally

Our benefits

- Basis of batches = reliability of the figures, acceptors and rates
- Reports made by Eco-systèmes = done and verified at the same time
 - No more time spent on controlling and correcting more than 100 reports
 - No more mistakes!
 - Uniform and comparable reports and rates
 - No more teaching new treatment partners (sometimes more than 10 new with new contracts)
- Unfortunately: only use the tool as a database and a calculation tool
